Marine Mounts

Product Description

Marine mounts were originally designed for use with marine propulsion engines and are therefore failsafe to accommodate thrust. In recent years, marine mounts are popular across a wide range of industries. Which is why we now offer it with steel parts in stainless steel, quality AISI 316. The mounts provide different stiffness in each direction, which provides optimum performance, particularly for IC engines.

Applications

Marine propulsion engines, generator sets, diesel engines, vehicles, pumps, and compressors. Also for other very corrosive environments such as offshore agricultural and coastal applications.
