Chassis mounts CHM/TF

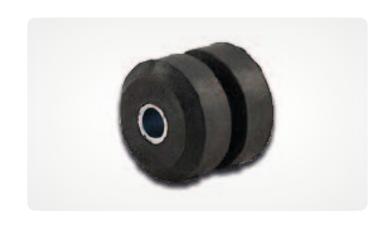

## **Product description**

The CHM mount consists of two rubber parts, wherein the centre of the unit contains a metal pipe in order to reduce wear on the rubber, resulting in a longer service life.

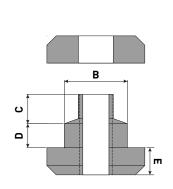

This vibration unit is ideal for use where there are large dynamic loads and where a high level of stability is required.

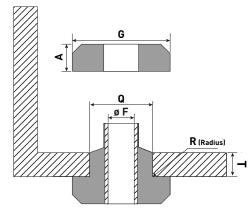

## **Application**

Machine houses, agricultural and forestry machines.

Hardness 45 Sh(A)

											Maximum	Deflection	Maximum	Deflection		
	Туре	A [mm]	W [mm]	C [mm]	D [mm]	E [mm]	Ø F [mm]	G [mm]	Q [mm]	T [mm]	T [mm]	R	load [kg]	[mm]	load [kg]	[mm]

## **Product description**

The TF rubber anchor consists of rubber bushing with a vulcanised thread. Suitable for holes with diameters such as d2. It is tightened by the threaded section being drawn toward the large flange

## **Application**

For hanging equipment Machine houses, agricultural and forestry machines.
